

WHAT IS CLAIMED IS:

1. A sanitizer for bedding comprising:
  - an irradiation chamber;
  - a light support mounted for reciprocation within said chamber;
  - a light for radiating into said chamber, said light supported by said light support; and
  - a bedding support mounted so as to be at least partially withdrawable from said chamber.
2. The sanitizer of claim 1 wherein said light support is mounted medially within said chamber.
3. The sanitizer of claim 2 wherein said bedding support supports bedding such that it extends on either side of said light support.
4. The sanitizer of claim 1 further comprising a motor for reciprocating said light support.
5. The sanitizer of claim 1 further comprising:
  - a second light support mounted for reciprocation adjacent said chamber; and
  - a second light for radiating into said chamber, said second light supported by said second light support.
6. The sanitizer of claim 1 wherein said light is a narrow spectrum light.
7. The sanitizer of claim 1 wherein said light is an ultraviolet light.

8. The sanitizer of claim 1 further comprising a fan for circulating air within said irradiation chamber.

9. The sanitizer of claim 8 wherein walls of said chamber are embossed to impart turbulence to air circulated in said chamber.

10. The sanitizer of claim 1 wherein said light support comprises screws.

11. The sanitizer of claim 12 wherein each of said screws is threaded with a first spiral thread and a second spiral thread, said first spiral thread meeting said second spiral thread at a top end of said screw, said first spiral thread and second spiral thread arranged such that a direction of tracing that traces said first spiral thread toward said top end of said screw traces said second spiral thread away from said top end of said screw.

13. The sanitizer of claim 12 further comprising at least one motor for driving said screws in said direction.

14. The sanitizer of claim 13 wherein said light support comprises a lifting assembly surrounding each of said screws, each lifting assembly supported by a thread of said screw so that rotation of said screws in said direction causes said lifting assemblies to trace one of said first spiral thread and said second spiral thread.

15. A sanitizer for bedding comprising:

an irradiation chamber;  
a plurality of light supports mounted for reciprocation within or adjacent said chamber;  
each of said plurality of light supports supporting a light for radiating into said chamber.

16. The sanitizer of claim 15 further comprising:

a bedding support mounted so as to be at least partially withdrawable from said chamber.

17. A sanitizer for bedding, comprising:

an irradiation chamber;  
a support mounted for reciprocation within said chamber; and  
a narrow spectrum light for emitting into said chamber, said light supported by said support for reciprocation.
